WORLD'S
INFRASTRUCTURE
HIGH VALUE
ENGINEERING
CENTRE**

ABOUT US

HYVE is a multi-disciplinary infrastructure consultancy organization that offers High Value Engineering (HVE) Design services to clients across the globe. For clients in Australia and UK, we are also able to have a team of professional engineers to review and sign off on designs to ensure local compliance. Whether you are suddenly asked to take up extra work on a current project and need extra resources, or you are bidding on a large project that would need you to expand your team suddenly, Hyve can be your backend support team.

HYVE Benefits

- Enhanced focus on quality
- Large pool of resources, quick scaling up of teams
- Long history of training resources
- Adherence to schedule all deliverables all projects managed by our coordinators
- Cost effective
- Resilient team
- Dedicated team for long term project
- Proven adaptability to different design
- Local presence to increase accountability
- Global experience across all infrastructure sectors

Resource Support | Offshore and On-site

India has the largest pool of qualified engineers in the world and thus by being based in India, Hyve is able to tap into this network. Trained and monitored by our sector experts, HYVE is able to setup off-shore design teams to cater to your design resource shortages. While we live in an age where remote working is possible, we are appreciative of the fact that there could sometimes be a requirement for some resources to be shortly deployed on site to be embedded with your teams. Our resources could also be deployed for the short term assignments at project locations subject to prevalent visa conditions.

Bespoke Designs | Unique to your needs

Under the guidance of HYVE's senior experts, we are able to undertake complex, non-standard designs for individual design sections or for entire projects on assignment basis.

HYVE QUALITY FOCUS

All our teams follow HYVE's stringent quality control process whether their designs are ultimately reviewed by your leads or ours.

KEY PROJECTS

Carmichael Rail Project, Australia

Detailed Design including Civil, H&H, Alignment, Drainage, Geotech, Bridges, Culverts for 200 km of rail line.

Kings & German Creek Timber Bridge Replacement, Australia

Detailed design for timber bridge replacement of Kings Bridge (72m long) and German Bridge (15m long) on Queensland Rail Network.
